

## ABOUT ENGIE-ELECTROPROJECT

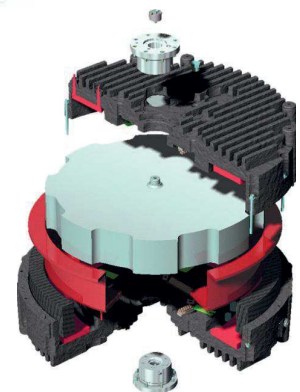

**The world is changing around us. However, your needs remain the same:**

You still want guarantees. That your business processes are safe, reliable, energy-efficient and sustainable, but especially: they do not stop at once. And when that happens we make sure you do not notice anything about it. Electroproject gives you this assurance. We deliver and guarantee "movement" so your continuity will never be compromised.

## CRITICAL POWER: CREATE YOUR OWN GUARANTEES

Business processes need power. But how reliable are these types of deliveries actually? And what happens when a temporary malfunction occurs? Is everything silent or is there an emergency power supply. Critical Power is only about one point: how dependent are you on your energy supplier? Guarantees do not exist in life. Unless you create them yourself. For this reason, more and more companies choose our modular Critical Power Solutions. This is often a combination of a genset with a dynamic UPS. Electroproject designs, realizes and maintains this type of Critical Power system, focusing on ease of use, continuity, durability, power consumption and efficiency. At the same time, we ensure that they connect seamlessly with your infrastructure.

In addition, we put your business process in addition to your regular energy supply, and we will analyze the critical components on this basis. Then we will proactively work with you to find the right alternatives for this, so that the chance of disturbing your business processes becomes even smaller. Create your own guarantees.
